

CALEB SAMRAJ D

Software Developer | Python & AI-Integrated Applications | Automation (Power Platform)

Chennai, Tamil Nadu, India | 6380193738 | calebsamraj0@gmail.com | linkedin.com/in/caleb-samraj-d | github.com/CalebSamraj14

PROFESSIONAL SUMMARY

Final-year Electronics and Communication Engineering student with hands-on internship experience building software applications and AI-assisted features. Skilled in Python, SQL, JavaScript, and REST API integration, with practical experience using AI APIs for intelligent application features, Supabase for authentication and CRUD operations, and Microsoft Power Apps/Power Automate for workflow automation. Strong analytical and problem-solving ability, fast learner, and effective collaborator across the SDLC.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, SQL, HTML5, CSS3

AI & Automation: AI API Integration, Prompt Engineering, Generative AI Fundamentals, Power Apps, Power Automate, Python Automation

Database & Backend: Supabase, SQL, REST APIs, Authentication, CRUD Operations

Infrastructure & Networking: Windows, Linux Basics, Networking Fundamentals

Digital Design: Verilog, VHDL, Digital Logic Design, FPGA Basics

Tools & Version Control: Git, GitHub, Visual Studio Code, Postman

Core Strengths: Communication, Problem Solving, Analytical Thinking, Quick Learning, Team Collaboration, Adaptability

INTERNSHIP EXPERIENCE

Software Developer Intern — Larsen & Toubro (L&T)

2025

- Developed web application features using HTML, CSS, and JavaScript, with backend functionality built in Python.
- Worked with SQL databases and integrated Supabase for user authentication and CRUD operations.
- Built AI-powered application features using Python and AI APIs to support intelligent functionality.
- Built business applications using Microsoft Power Apps and automated workflows using Power Automate, including dashboards, reports, and search/filtering features.
- Performed debugging and testing of application features; collaborated with mentors and team members throughout the Software Development Life Cycle (SDLC).

PROJECTS

AI-Powered IT Incident Management System

Python | Power Apps | SQL | Supabase | JavaScript

- Built an incident tracking system with a dashboard for logging, monitoring, and managing IT incidents end-to-end, including authentication, search, and filtering.
- Automated incident status updates and integrated AI features to assist with incident classification and monitoring.

Document Management Dashboard

HTML | CSS | JavaScript | Python | Supabase | SQL

- Developed a responsive dashboard for managing documents with authentication and role-based access control.
- Implemented CRUD operations, search, and analytics/reporting features backed by a Supabase/SQL database.
- Designed the interface for usability across devices and ensured secure, role-appropriate access to records.

LFSR-Based Pseudo-Random Sequence Generator (Final Year Project)

Verilog/VHDL | Digital Logic Design | FPGA/Simulation Tools

- Designed and simulated a Linear Feedback Shift Register (LFSR) circuit to generate pseudo-random binary sequences using Verilog/VHDL.
- Verified functionality through simulation and studied feedback polynomial selection to optimize sequence periodicity.

EDUCATION

Bachelor of Engineering (B.E.) — Electronics and Communication Engineering

Expected Graduation: 2026

CERTIFICATIONS

- NPTEL Certification — Internet of Things (IoT)
- NPTEL Certification — Cloud Computing
- In Progress: Microsoft Azure Fundamentals (AZ-900)
- In Progress: Microsoft Power Platform Fundamentals (PL-900)
- In Progress: ITIL Foundation
